

Collapses, cracking and a natural avalanche on Mineral Mountain

Mineral Mountain

Cooke City

1/5/2021

Code

SS-N

Latitude

45.03030

Longitude

-109.99800

Notes

New snow: about 6" of fresh in town- from last night.

We observed a few fresh natural avalanches out there today. Photo of one attached: a S, SE [aspect](#) on Mineral Mountain. That [slide](#) looked to have occurred last night, and is estimated to be around 4-500' wide.

There were also a handful of smaller [slab](#) avalanches on NW though NE aspects in the cirque of Mt. Republic, which looked to be more like 36-48 hrs old.

Quite a few large collapses experienced today as well- in the mid and upper elevations.
