

Weak layer in Bradley Meadows

Date

Sun, 11/06/2022 - 02:50

Activity

Skiing

4:30 PM Sunday Nov 6, 2022.

I was skinning up Bradley Meadows. I was about 2 switchbacks from the top on the slightly steeper pitch. I pulled over to dig a snow pit and found a weak layer of facets appx 7" from the surface and a second weak layer just above the ground. I performed a compression test which failed on the second tap from shoulder height at the upper facet.

I interpreted this as a questionable snowpack and returned via my low angle skin track.

Region

Bridger Range

Location (from list)

Bradley Meadow
