

Divide Peak

Date

Sun, 12/04/2022 - 13:30

Activity

Skiing

Snow pack of 108cm on a 25 NE facing slope at 9,625'

Observed CT11 Q2 at new/old interface, 93cm, as well as an ECTN13 Q2 on what we believe to be a buried layer of surface hoar at 26cm. Also had some warming of the surface.

With the poor pit performance we decided to not ascend to the ridge and ski the intermediate terrain in the cirque, then out the drainage.

Region

Northern Gallatin

Location (from list)

Divide Cirque

Observer Name

Shep
