Activity

Snowmobiling

Did a day of field work in the Absarokas up Mill Creek via snowmobile and ski. We got to approximately 8500 ft, and the snowpack there was ~150cm deep on a S aspect, with 2-3 inches of surface snow over a crust. Moderate to intense wind transport at treeline and above treeline. Snowed S-1 to S2 all day, and was raining below ~6000 ft when we sledged out.

Region

Out of Advisory Area

Observer Name
