Mill Creek Obs

Date Fri, 03/10/2023 - 00:00 Activity Snowmobiling

Did a day of field work in the Absarokas up Mill Creek via snowmobile and ski. We got to approximately 8500 ft, and the snowpack there was ~150cm deep on a S aspect, with 2-3 inches of surface snow over a crust. Moderate to intense wind transport at treeline and above treeline. Snowed S-1 to S2 all day, and was raining below ~6000 ft when we sledded out.

Region Out of Advisory Area Observer Name N. de Leeuw
