

Storm obs near Big Sky

Date

Sun, 03/26/2023 - 16:40

Activity

Skiing

Near Big Sky today we found 8-14" of right side up storm snow from 7500' to 9400' on a south southeast aspect. We observed very minimal and isolated cracking on the occasional wind pillow, but by and large the snow was non-reactive, unconsolidated, and very well bonded to the stout crust below.

Winds were light and variable and it snowed lightly all day, accumulating about 3" by the late afternoon.

Region

Northern Madison

Observer Name

Josh Lipkowitz
