Wind Slab Avalanche on Quarter Saddle

Date Wed, 02/28/2024 - 13:05 Activity Skiing

I was skiing inbound at Bridger Bowl today and noticed a small wind slab avalanche that failed on quarter saddle. I estimate comparing the photo to Google Earth that the slide ran 250 vertical feet and broke 100+ feet wide. Ongoing wind-loading and obvious instability.

Region Bridger Range Location (from list) Saddle Peak Observer Name Dave Zinn
