Snowmobiling

From SnoWest Forums FB Page:

“Just getting word of a LARGE Remote Rider Triggered [Slab](#) Avalanche down inside of Black Canyon itself just off the Black Canyon Loop Trail in Island Park.

A 3-4ft thick [slab](#) broke loose and filled the bottom of the canyon with 12-15 FEET of debris, completely blocking off the canyon itself. Rider was NOT caught in it!! Had the rider been caught, there would have been ZERO chance of rescue under such a deep [slide!](#)”

Region

Out of Advisory Area

Location (from list)

Black Canyon
